Danish Healthcare Design has gathered all dispensers of the clinic in one revolutionary system, which will fit every clinic wall. Inform sanitation station is developed in collaboration with leading Danish industrial designers in which the focus was to reach the essence of Scandinavian design and make functionality and design form a synthesis.

The dispensers are made of aluminium and can be placed together or separately. The fronts are easily opened for re-filling and if you want to expand the system you only need to order the wanted dispenser and a wall rail for the specific variant.
